## Population Growth in Oregon: 2000-2003

Oregon State's population was estimated to be 3,541,500 on July 1, 2003, representing an increase of 120,101 over the April 1, 2000 Census count and 36,800 over the 2002 estimate.

While the annual population growth rate in the 1990s marked 1.85 percent, it dropped to 1.06 percent during the 2000-2003 period, reflecting Oregon's downturn economy and its significant impact on net migration (people moving into the state minus people leaving the state). Between April 1, 2000 and July 1, 2003, net migration was estimated at 66,845, accounting for only 56 percent of the total population growth. The remaining 44 percent was due to natural increase (births minus deaths). By comparison, between 1990 and 2000, migration accounted for 73 percent of the total growth and only 27 percent was due to natural increase. Migration is primarily driven by economic reasons. When the state economy was good, migration flows increased as people moved here to take advantage of employment opportunities. When the economy went into recession, the migration flows slowed down, and so did the population growth. Despite the high unemployment rate in Oregon in 2002-2003, there were still positive inflows of migration, among them were outdoor minded young adults, retirees and immigrants, whose primary motivations were not so economically oriented.

While the statewide growth rate was 3.5 percent since April 1, 2000, the population change varied considerably for the Oregon's six metropolitan areas and for its 36 counties. The newest metropolitan area, Bend, has become the fastest growing MSA since 2000, with a growth rate of 13 percent. The newly expanded Portland-Vancouver-Beaverton MSA grew by 4.7 percent (the new definitions released by the Office of Management and Budget on June 6, 2003 adds Skamania County in Washington to the MSA). The Medford MSA grew by 4.3 percent, followed by the Salem MSA (3.7 percent). The other two, Eugene-Springfield MSA and Corvallis MSA trailed behind the state average, with growth rates of 2 and 3 percent, respectively.

Among the state's 36 counties, Deschutes was the fastest growing county since 2000, with a double-digit growth of 13 percent. Two other Central Oregon counties also grew considerably above the state average. Crook County grew by 5.82 percent, and Jefferson County grew by 4.69 percent. The largest population increase occurred in Washington County, where more than 27,000 residents were added since April 1, 2000. Multnomah County ranked second, gaining about 17,300 people.

While nine counties---Clackamas, Crook, Deschutes, Jackson, Jefferson, Marion, Morrow, Washington, and Yamhill grew faster than the state average between April 1, 2000 and July 1, 2003, the remaining 27 counties experienced slower or negative growth. Among them, nine counties witnessed net population loss.

The population of Oregon's incorporated cities and towns reached 2,412,080 on July 1, 2003, accounting for 68 percent of the total population. The estimates, however, need to be evaluated with caution, especially for big cities. The soaring number of building permits issued in 2002 and 2003, on which the housing unit method is based for city population estimates, may have inflated the population figures. Not all permits materialized into actual construction, and not all new constructions were occupied. Lacking vacancy information, it was impossible to adjust the housing-based population numbers. Over the long run, however, the effect of the housing spike will gradually iron out.

Between 2002 and 2003, three more cities of Oregon had their official census population and housing figures revised and re-certified through the U.S. Census Bureau's Count Question Resolution program. These three cities were Lowell, Veneta, and Oakridge. A total of 12 Oregon's cities have successfully challenged the 2000 Census counts.

## **Population Estimates for Oregon, July 1, 2003**

This report presents population estimates for Oregon and its counties and incorporated cities for July 1, 2003. The eleven tables in this report show current 2003 population estimates as well as historical data.

- Table 1 presents the components of population change for the state of Oregon, from April 1, 1960 to July 1, 2003.
- Table 2 shows the population by area types and the population for specific metropolitan areas from April 1, 2000 to July 1, 2003.
- Table 3 shows the components of population change for Oregon's counties, from April 1, 2000 to July 1, 2003.
- Table 4 shows the population size for the state of Oregon and its counties and incorporated cities, from April 1, 1990 to July 1, 2003.
- Table 5 shows population information on Oregon's incorporated cities that are located in more than one county.
- Table 6 presents the rank of Oregon's incorporated cities by their July 1, 2003 population size.
- Table 7 offers an alphabetical listing of Oregon's incorporated cities with their estimate of population size on July 1, 2003 and the change between April 1, 2000 and July 1, 2003.
- Table 8 presents information on the population added to incorporated cities due to annexation between April 1, 2000 and July 1, 2003.
- Table 9 displays estimates for the population by age and sex for the state of Oregon and its counties for July 1, 2003.
- Table 10 shows estimates for the population by selected age groups (birth to 17 years of age, 18 to 64 years of age, and 65 years of age and older) for the state of Oregon and its counties for July 1, 2003.

### **State Requirements for Population Estimates**

Oregon law (Oregon Regulatory Statutes 190.510 to 190.610) mandates the Population Research Center, Portland State University, acting on behalf of the State Board of Higher Education, to prepare annual population estimates for each county and incorporated city in the state of Oregon. The principal purpose of the population estimates is for the allocation of selected tax revenues to cities and counties.

The state government organized a State Census Office in Portland in 1956. The purpose of the State Census Office was to oversee and certify special censuses that rapidly growing towns conducted in order to document their population figures. The State Census Office eventually expanded its role to include the certification of the population added by annexations and the preparation of annual population estimates for counties.

Administrative responsibilities for population estimates were transferred to Portland State University in 1965, when the unit changed its name to the present one. The Population Research Center is located within the College of Urban and Public Affairs.

### **Duties of the Population Center**

In addition to preparing population estimates and projections, the Center houses the Oregon State Data Center, the lead agency in Oregon for contact and collaboration with the U.S. Bureau of the Census and for dissemination of census data and documents. This information includes current and past census data for Oregon as well as results from Census Bureau surveys.

The Population Center provides a research and teaching focus for the investigation of the causes and consequences of demographic change in current society. Typical research activities include enrollment forecasts for school districts, survey research on population issues, social and economic factors affecting demographic change, population distribution and migration, population geography, and demographic methods. Population staff regularly assist city, county, and state governments on examination of population issues.

Staff in the Population Center teach in the School of Urban Studies and Planning, College of Urban and Public Affairs. The School of Urban Studies and Planning offers a graduate certificate program in applied demography, an applied demography curriculum in the Master of Urban Studies degree program, and a graduate concentration within applied demography in the Ph.D. program.

### **Methods for Population Estimates**

We include all residents in cities, counties, and the state in the population estimates. Residents include people living in their own homes, rental homes or apartments, mobile homes, or in college dormitories, nursing homes, jails and prisons, and other group quarters. We consider college students to be residents of the place where they live while attending college. We count seasonal residents as living at the place that they consider to be their usual residence.

We have developed methods for Oregon's population estimates to be as accurate as possible. Toward this goal, we work closely with state, county, and city officials, requesting information from them and inviting their review of our methods and estimates.

For estimates for the state population, we rely on the registration of births and deaths for an estimate of natural increase (the excess of births minus deaths). We use school enrollments data for an estimate of net migration for the population under 18 years, non-farm payroll information for the population aged 18 to 64, and Medicare data for the population aged 65 and older.

We base county population estimates on a method called ratio correlation. The ratio correlation method relates changes since the last census to changes in state income tax returns, school enrollments, births, and Medicare enrollments. We track changes in each of these types of administrative data to make an estimate of the current county populations. We also examine changes in the housing stock as a check on the accuracy of the county estimates.

We determine city population estimates based on changes in the housing stock. City officials report each year on the changes in their city's housing stock (for single family units, multi-family units, and mobile homes) and the number of persons residing in group quarters. We also take into account any population changes that have been due to annexations. We separately estimate possible changes due to the number of people per housing unit and use this information to prepare the city's final population estimate.

We monitor city annexations throughout the year. We are informed about annexations by the office of the Secretary of State. When an annexation occurs, we contact city officials to find out the number of residential housing units and population, if any, involved in the annexation. If the annexation added people to the city's population, then we certify an updated city population on a quarterly basis, in a special report to the Secretary of State's office.

We base annual July 1 population estimates on administrative data available to us in September and October each year. We prepare preliminary estimates for cities and counties in mid-November. Based on reviews that we receive from city and county officials, we revise the annual population estimates and release final population estimates in December. When done, we release the city and county estimates on our Population Research Center website. We publish all estimates in this report, generally available in March each year.

### **Acknowledgement**

This report was prepared under the general direction of Qian Cai, manager of the population estimates and projections unit of the Population Research Center. Professional consultation was provided by George Hough, Jr., Acting Director of the Population Research Center. Edie Timmermans provided help on report preparation and distribution.

Portland-Vancouver-Beaverton, OR-WA MSA consists of Clackamas, Columbia, Multnomah, Washington, Yamhill Counties of Oregon, and Clark, Skamania Counties of Washington.

Eugene-Springfield MSA consists of Lane County.

Medford MSA consists of Jackson County.

Salem MSA consists of Marion and Polk Counties.

Corvallis MSA consists of Benton County.

Bend MSA consists of Deschutes County.
